

# Importance of Immunizations

Keep  
your kids  
healthy, get  
them  
vaccinated

Ensuring children are up to date on their immunizations is critical to improving their health and the health of our community.

## **Vaccinations help protect children from serious diseases, including:**

- Meningitis
- Mumps
- Measles
- Rubella
- Whooping Cough
- Hepatitis A and B
- Diphtheria
- Tetanus

All school-age children entering kindergarten or seventh grade must be fully immunized in order to attend school, a development center, family day care or nursery care.
